

Sahara® DG Herbicide

MIXING RATES

Backpack Sprayer, 4 Gallon Size:

1 1/2 pounds of Sahara® DG herbicide per 4 gallon backpack

A full sprayer of Sahara should treat approximately 4,000 square feet (10 ft. x 400 ft.).

If you spray 2 feet wide, a sprayer full will treat 2,000 feet of fence line.

Note: Always add a high quality, non-ionic surfactant: 2 ounces per 1 1/2 pounds of Sahara.

Hand Sprayer, 3 Gallon Size:

1 pound of Sahara per 3 gallon sprayer

A full sprayer of Sahara should treat approximately 3,000 square feet (10 ft. x 300 ft.).

If you spray 2 feet wide, a sprayer full will treat 1,500 feet of fence line.

Note: Always add a high quality, non-ionic surfactant: 1.5 ounces per 1 pound of Sahara.

4-Wheeler, 20 - 25 Gallon Tank:

7 1/2 pounds of Sahara per 20 gallon tank

A full tank of Sahara should treat approximately 1/2 acre.

If you spray 2 feet wide, a sprayer full will treat 2 miles of fence line.

Note: Always add a high quality, non-ionic surfactant: 8 ounces per 7 1/2 pounds of Sahara.

High Volume Power Sprayer – Handgun:

15 pounds of Sahara per 100 gallons of water, spray to wet

Note: Always add a high quality, non-ionic surfactant: 1 quart per 100 gallons of water per 15 pounds of Sahara.

Broadcast Application:

15 pounds of Sahara per acre in 20 to 50 gallons of water per acre

Note: Always add a high quality, non-ionic surfactant: 1 quart per 100 gallons of water per 15 pounds of Sahara.

Caution – Stay at least two drip-lines away from desirable trees and shrubs.
